

HELLO SPRING

# What has winter left behind in your lawn and pavers?

## Probably weeds – and lots of them

This year has been one of the wettest winters that Perth has seen in a long time. Which means that the weeds are out in full force. Taking over paved areas and rearing their ugly heads in our lawns. So while your garden beds might look tip top from our gardener's visit, it never looks quite complete with a weedy struggling lawn.

Weeds like Oxalis, bindii (*the nasty one with prickles*), cape weed and clover make your lawn look unsightly, take over and out compete your turf making it look tired and unhealthy.

When these weeds go to seed in late spring they send out thousands of tiny seeds ready for germination the following year.

## Timing is everything

There is still time to treat your lawns before your weeds drop their seeds. With one simple treatment we can eliminate the weeds in your lawn to make your property look fabulous (and prickle free) this summer.

## Spring Special\*

We will spray your paving for FREE when you book to have your front and back lawn treated for weeds.

Spring  
Special\*

We'll  
spray your  
paving for  
**FREE!**
